

Cup Rocket Launcher

Two plastic cups and some rubber bands are all you will need to launch your own rocket right there in your living room. Try different-sized cups to see what flies the highest!

What You Need:

- ✓ 2 small plastic cups
- ✓ 5 or more rubber bands
- ✓ Markers for decorating (optional)

1 Wrap a rubber band around one cup, going from the top of the cup to the bottom.

2 Wrap a second rubber band around the cup in the same fashion, only this time crossing the other band.

3 Use remaining rubber bands to wrap around the body to secure the first two in place. You can use different colors, which act as a decoration as well! This is your rocket.

4 If you like, use markers to decorate the second cup, which is your launch pad. Draw flames to illustrate the rocket taking off!

5 Place the cup without the rubber bands (launch pad) upside down on the table or floor.

6 Place the rubber-banded cup (rocket) on top of the "launch pad" cup so that the rubber bands at the open end of the cup rest on the solid bottom of the launch pad.

7 Holding the sides of the rocket, push down over the launch pad, stretching the rubber bands. Release the rocket and watch it fly!

IT'S A SNAP

Keep your glasses or sunglasses in place by making a rubber band chain and looping the ends around the earpieces of your glasses.
