

What You Need:

- ✓ 8 x 10" piece of sturdy cardboard
- ✓ Duct tape
- ✓ 1 standard rubber band
- ✓ Scissors

Rubber Band Powered BOAT

You can make your very own paddleboat with just a few supplies! Have races in the swimming pool or set sail in the tub.

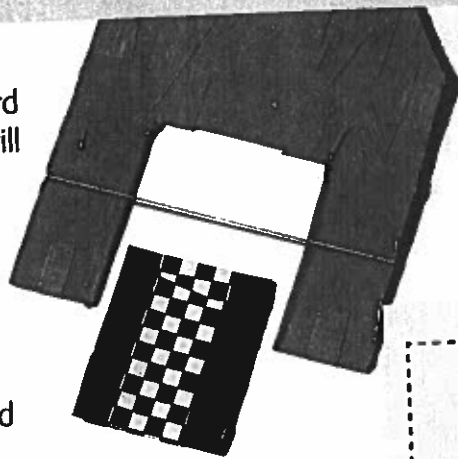

1 From the bottom of the cardboard, cut out a section about three inches wide and four inches high.

2 Cut the top of the cardboard into a triangular shape (about five inches high).

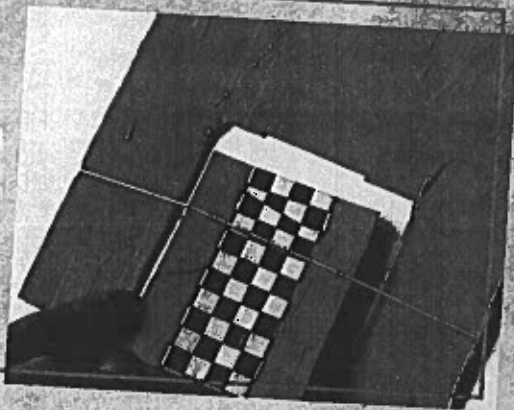

3 For the paddle, trim the rectangular piece that you just cut out down to 2½ x 3½".

4 Cover all of the cardboard pieces with duct tape. This will make your boat waterproof. You can decorate it any way you like.

5 Wrap the rubber band once around the outside of the two long strips at the end of the boat.

6 Insert the rectangular piece in between the rubber band in the rectangular opening.

7 Wind the paddle several times which will twist up the rubber band.

8 Place the boat in the water and let it go! The paddle will turn pushing the boat through the water.
